

■ 1 Warehouse + 3 Branch Locations
■ Products: Mixture, Ompodi, Kaju Katli & More
■ Prepared: April 2026

1. Understanding Your Business

Your bakery manages a central warehouse that supplies three branch shops with freshly made South Indian sweets and savoury snacks. Today you track everything manually — ingredients, production batches, branch dispatches and daily sales — which creates errors and blind spots. This software brings it all into one screen.

Location	Role	Key Activity
Warehouse	Production Hub	Store ingredients, make products, dispatch to branches
Branch 1	Retail Shop	Receive stock, sell, report returns & daily sales
Branch 2	Retail Shop	Receive stock, sell, report returns & daily sales
Branch 3	Retail Shop	Receive stock, sell, report returns & daily sales
Future Branch	Expandable	System supports adding unlimited branches

2. Core Features

Ingredient & Raw Material Management

Track every ingredient — masalas, ghee, spices, ginger — by grams, packets (10 g, 15 g, ½ kg, 1 kg) or bulk quantity. Full unit-conversion engine so you always know real stock.

Product Recipe (Bill of Materials)

Define the exact recipe for every product: how many grams of each ingredient go into 1 batch of Mixture, Kaju Katli, Ompodi, Egg Puff, etc. System auto-calculates raw material consumption per batch.

Production & Batch Tracking

Log each production run — date, quantity made, ingredients consumed. Example: 'Made 200 Egg Puffs today → consumed X g maida, Y g oil...'

Branch Dispatch & Transfer

Send 100 puffs to Branch 1, 50 to Branch 2, 50 to Branch 3 with one entry. Warehouse stock decreases automatically. Full transfer history.

Daily Sales & Returns Entry (per Branch)

Each branch records: items sold + items returned (unsold). End-of-day summary shows: Dispatched – Returned = Actual Sales per branch.

Expiry Management — 3 Tiers

Tier 1 (12-hr validity): Egg Puff, Chicken Roll → alert if not sold same day. Tier 2 (1-30 days): Mixture, Ompodi, Karam items → set mfg & expiry date, track remaining shelf life. Tier 3 (Custom): Any product with a user-defined shelf life.

Low Stock & Ingredient Alerts

When you plan to make a product, system checks all required ingredients. If any item is below minimum level, a dashboard alert shows immediately — with the last vendor's name and phone number for quick reorder. (WhatsApp automation ready for Phase 2.)

Vendor Management

Store vendor details for each ingredient. System auto-links 'last vendor' to low-stock alerts so your team knows who to call instantly.

Dashboard & Reports

Live dashboard: stock levels, today's production, branch-wise sales, expiring items. Reports: daily/weekly/monthly sales, waste %, vendor spend.

User Friendly & Mobile Ready

Clean, simple interface. Branch staff can use it on a phone or tablet. Role-based access: warehouse manager vs branch staff vs owner view.

3. How a Typical Day Works (Example: Egg Puff)

Morning

Warehouse makes 200 Egg Puffs. System deducts ingredients from stock. Expiry set to end of same day (12-hr validity).

Dispatch	100 puffs → Branch 1 50 puffs → Branch 2 50 puffs → Branch 3. One click. All balances updated.
Evening	Branch 1 returns 8 puffs (unsold). Branch 2 returns 5. Branch 3 sold all 50.
Night Report	System shows: Sold = 200 – 13 returns = 187 puffs sold. 13 puffs marked expired/waste.
Next Morning	Dashboard shows ingredient levels. If maida is low, alert appears with flour vendor's contact.

4. Recommended Technology

Layer	Technology	Why
Frontend (UI)	React.js / Next.js	Fast, mobile-friendly, works on any device
Backend (API)	Node.js + Express	Reliable, easy to extend
Database	PostgreSQL	Handles multi-branch data safely
Hosting	Cloud VPS (affordable)	Always online, accessible from all branches
WhatsApp Alerts	WhatsApp Business API (Phase 2)	Auto-notify on low stock
Reports	PDF export built-in	Print daily / weekly summaries

5. Project Phases & Timeline

Phase 1	2–3 weeks	Ingredient management · Product recipes · Warehouse stock · Low-stock alerts with vendor info
Phase 2	2–3 weeks	Production batches · Branch dispatch & transfer · Expiry management (all 3 tiers)
Phase 3	2 weeks	Branch sales & returns entry · End-of-day reports · Dashboard with charts
Phase 4	1–2 weeks	User roles & login · WhatsApp alert integration · Final testing & deployment

■ **Total estimated timeline: 7 – 10 weeks from project kick-off to live deployment.**

6. Cost Estimation

The investment below is a professional estimate. Final pricing depends on your exact requirements, number of users, and hosting preferences. A detailed quote will be provided after a 30-minute requirements call.

Module	Scope	Est. Cost (INR)
Phase 1 – Ingredient & Recipe Mgmt	Stock, recipes, low-stock alerts, vendor contact	■ 25,000 – 35,000

Phase 2 – Production & Dispatch	Batch production, branch transfer, expiry tiers	■ 20,000 – 30,000
Phase 3 – Sales, Returns & Reports	Branch sales entry, returns, dashboard, PDF reports	■ 25,000 – 28,000
Phase 4 – Users, WhatsApp & Deploy	Role-based login, WhatsApp API, cloud hosting setup	■ 15,000 – 20,000
Total Project	Complete system, all 4 phases	■ 80,000 – 1,13,000

■ What's Included	■ What's Extra (Optional)
✓ Full source code (you own it) ✓ 1 month free bug fixes after launch ✓ Training for your staff ✓ 3 branch + warehouse access ✓ Mobile-responsive design ✓ Basic cloud hosting setup	→ Android / iOS native app: +■ 30,000 → Annual maintenance contract: ■ 12,000/yr → Cloud hosting (monthly): ■ 800 – 1,500/mo → WhatsApp Business API fees (Meta) → Barcode scanner integration: +■ 8,000

7. Next Steps to Get Started

- Step 1:** Share this proposal with your client and collect feedback / changes.
- Step 2:** Schedule a 30-minute call to finalise features and confirm the phase scope.
- Step 3:** Sign a simple agreement and pay Phase 1 advance (typically 40%).
- Step 4:** Development begins. Weekly demo of progress until launch.
- Step 5:** Go live on all branches. Staff training provided.

This proposal is valid for 30 days from the date of issue. All prices are estimates in Indian Rupees (INR) inclusive of development only; taxes, hosting fees, and third-party API costs are billed separately. Actual timeline and cost may vary after detailed requirements discussion.
